

# TRASHCANS UNLIMITED<sup>∞</sup>

THE BEST TRASH CANS AT THE BEST PRICES

## The World's First Self-Sealing and Changing Trash Can

- New level of automation for your home
- Innovative sealing technology
- Beautiful, minimal design to suit any household

## More Than Taking Out Trash

A little less messy,  
even on a good day

**The first truly automatic trash can | infrared motion sensor | seals in odors | 15.5 L capacity**

# townew

Simple Tech For Your Modern Home

### Self-Sealing

In one touch, the built-in thermoplastic sealing technology automatically seals the trash bag inside.

### Self-Changing

In one touch, a new trash bag is automatically replaced into the trash can.

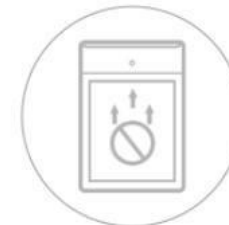

### Infrared Sensing

Latest sensor technology will detect movement and approaching objects from the distance of up to 35cm and pop the lid up automatically.

### Overload Feature

Detects when the trash can is too full, lifting the whole top compartment part of the trash can so it can seal the bag, guaranteeing you no spillage.

### Seals In Odors

Sealing technology keeps the smell secured inside guaranteeing no exposure to any bad odor.

### Rechargeable Battery

Powered by a 2000 mAh battery, it gives a long lasting battery life with a full charge that will last for a month.

# Townew Media Coverage

"This thing is amazing. After a couple of weeks of using the townew self-sealing/changing trash can, I have to say; I'm pretty impressed with it."

"We now have robots that can vacuum and mop our floors and cat litter boxes that are self-cleaning. So it's high time that we have a trashcan that can clean itself as well as open and close with a wave of your hand."

"A trash can automated with a purpose. It's pretty neat and especially useful when you have little ones with diapers and all the lovely smell that goes with it."

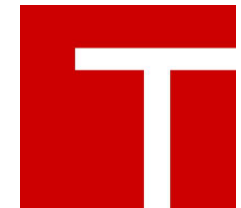

"Bottom line: While other trash cans can also auto-open, the townew trash can is the first we've seen with an ability to crimp and melt-seal bags."

"The 'townew' smart trash can is positioned as an automated solution that aims to provide a more hygienic experience for inhabitants."

Like any good idea, what prefigures the Townew is simple: a trash can that opens and closes its lid by itself, while also sealing (also autonomously) the bags when they are full (or when you deem it necessary)
